

metroSTOR R-Series Bin Storage Lockers

Designed to interrelate with the style of architecture necessitated by residential development frontages, the metroSTOR PBR Bin Storage Locker is developed with a consideration of the available space at hand, which is often at a premium. It's low profile design therefore minimises visual impact, which allows for ease of integration into both existing and new-build developments.

Design innovation in outdoor bin storage is readily adaptable for bespoke applications with metroSTOR. The sleek aesthetic of the PBR Bin Storage

Locker can be tailored to complement or contrast with the environment as desired, with sedum green roof options that function to create essential pockets of biodiversity in the urban landscape.

The PBR Locker is designed to enclose wheelie bin storage at a size of 140L – 360L, which are stored facing forward with lids either open or closed within the store. Internal design features give users the ability to 'tip' the bin for easy loading, while an all-steel construction combines long-term durability with a confident grasp of style.

Sliding Door Panels

Side access from sliding door panels minimises the space requirement

Cladding Panel Options

Cladding panel colours enables site-wide design coordination

Sleek Aesthetic

The panels can be tailored to complement or contrast with the environment

Easy Loading

Internal design features give users the ability to 'tip' the bin for easy loading
